Clarification: This project will be a Design/Bid/Build project advertised through the County's typical public bid process. This RFP is to select the consultant responsible for designing the desired solution and generation of bid documents. The prime contractor will be selected through a bid process following the consultant's completion of bid documents.

Additional Information: The Elkhart County Parks Department has already contracted with a soil scientist to perform soil borings for the sites. These soil reports are available upon request. The soil reports for sites where septic systems are anticipated have been submitted to IDOH for approval of 750 gal/day septic systems. The selected consultant will be responsible to design the septic systems to the minimum requirements issued by IDOH. It is anticipated that the septic system design will likely be reviewed and approved by the Elkhart County Health Department as issued with each technical data sheet outlining the minimum requirements according to the soil boring reports.
